

MAHAMANA PANDIT MADANMOHAN MALAVIYA CANCER CENTRE, VARANASI.
(A UNIT OF TATA MEMORIAL CENTER, MUMBAI.)

CASENO : KE/15816 Requisition No. LZZ/CT/22/511574
Name Mr. RAM AWADHESH SAH
Sex/Age : M / 67 Years Category/Status : B/ Out Patient
DMG : DMG GASTROINST.(A)
Service Desc CT Thorax & Abdomen & Pelvis Reqn Date : 10-11-2022
Provisional Diagnosis

Final Report

Report Date : 14-11-2022

CECT THORAX, ABDOMEN AND PELVIS DATED :12.11.22

TECHNIQUE: Contrast enhanced scan of the thorax, abdomen and pelvis has been performed on a MDCT scanner.

CLINICAL INFORMATION: Suspected ca stomach with liver metastasis.

FINDINGS:

CHEST:

Lungs: Few suspicious subcm sized solid nodules are seen in both lung parenchyma (right & left).

Pleura: No effusions.

Thoracic lymph nodes: No significantly enlarged supraclavicular, mediastinal, hilar or axillary lymph nodes by size criteria.

Mediastinum and esophagus: No significant abnormality.

Heart and great vessels: No significant abnormality.

Chest wall: Unremarkable.

Thyroid: No significant abnormality.

Central line:

ABDOMEN AND PELVIS:

Heterogeneously enhancing circumferential thickening is seen involving lesser curvature and antropyloric region.

Enlarged metastatic gastro hepatic nodes are seen, largest measuring 2.7 x 1.9 cm.

Multiple metastatic paraaortic nodes are seen, largest measuring 1.7 x 1.4 cm.

Liver: Multiple hypodense lesions are seen in both the lobes of liver, largest measuring 4 x 3 cm in
